INTERNATIONAL JOURNAL OF MASS SPECTROMETRY AND ION PROCESSES, VOLUME 75 (1987)

SUBJECT INDEX

acid–base association
stable covalent and hydrogen-bonded —. Ab initio study of $[CH_2O \cdot H \cdot NH_3]^+$ and $[CH_2NH \cdot H \cdot OH_2]^+$ complexes 1
alkali metals
considerations for ion density and temperature determinations in flames doped with — 63

$C^+ + H_2O$ reaction
a selected-ion flow tube study of the — 127
carbon cluster formation
— in an rf-spark source 171
charged particles
ejection of low-mass — in high magnetic field ICR spectrometers 47
$[CH_2O \cdot H \cdot NH_3]^+$ and $[CH_2NH \cdot H \cdot OH_2]^+$ complexes
stable covalent and hydrogen-bonded acid–base association. Ab initio study of — 1
collisional energy deposition probability
proposal for an analytical form of the — 83

dimethyl fumarate
fragmentation mechanism of dimethyl maleate and — by electron impact 147
dimethyl maleate
fragmentation mechanism of — and fumarate by electron impact 147
dissociative electron capture
— of H_2^+ into H^- fragments 329

effective work function
time variation of the — for thermal positive ion production from lithium atoms incident upon a rhenium surface in a high vacuum 233
electrohydrodynamic mass spectrometry
mass transport effects in — 291
electron scattering cross-section
a new technique to measure the total —. Application to helium 265

fiber optic interface
photodissociation in a quadrupole ion trap mass spectrometer using a — 345
flames
considerations for ion density and temperature determinations in — doped with alkali metals 63
floated gas collision cell
scan laws for tandem mass spectrometry using a — 243
flow tube techniques
diagnostics of — for ion/molecule reactions 27
geologic materials
a comparison of conventional and specimen isolation filtering techniques for the SIMS analyses of — 159

H^- fragments
dissociative electron capture of H_2^+ into — 329
H_2^+
dissociative electron capture of — into H^- fragments 329
helium
a new technique to measure the total electron scattering cross-section. Application to — 265
high magnetic field ICR spectrometers
ejection of low-mass charged particles in — 47

internal energy distributions
— of isolated ions after activation by various methods 181
ion formation
on the mechanism of — in spontaneous desorption time-of-flight mass spectrometry 319
ion/molecule reactions
diagnostics of flow tube techniques for — 27
isolated ions
internal energy distributions of — after activation by various methods 181

isolation filtering techniques
a comparison of conventional and specimen — for the SIMS analyses of geologic materials 159

lead oxide
an FAB–MS study of the krypton bombardment-induced secondary ion emission from some tin and — samples 15
lithium atoms
temperature dependence of the effective work function for thermal positive ion production from — incident upon a rhenium surface in a high vacuum 99
lithium atoms
time variation of the effective work function for thermal positive ion production from — incident upon a rhenium surface in a high vacuum 233
low-mass charged particles
ejection of — in high magnetic field ICR spectrometers 47

mass transport effects
— in electrohydrodynamic mass spectrometry 291

organic ions
on the detection of large — by secondary electron production 275

pencil thermoemission ion source
mass spectrometric investigation of the — 55
photodissociation
— in a quadrupole ion trap mass spectrometer using a fiber optic interface 345
pulsed ion currents
quantification of — produced in resonance ionization mass spectrometry 111

reflectron mass spectrometer
a — with UV laser-induced surface ionization 209
rhenium
temperature dependence of the effective work function for thermal positive ion production from lithium atoms incident upon a — surface in a high vacuum 99
rhenium
time variation of the effective work function for thermal positive ion production from lithium atoms incident upon a — surface in a high vacuum 233

scan laws
— for tandem mass spectrometry using a floated gas collision cell 243
secondary electron production
on the detection of large organic ions by — 275
spontaneous desorption time-of-flight mass spectrometry on the mechanism of ion formation in — 319

tandem mass spectrometry
scan laws for — using a floated gas collision cell 243
thermal positive ion production
temperature dependence of the effective work function for — from lithium atoms incident upon a rhenium surface in a high vacuum 99
thermal positive ion production
time variation of the effective work function for — from lithium atoms incident upon a rhenium surface in a high vacuum 233
tin
high-precision measurement of isotopic fractionation in — 91
tin oxide
an FAB–MS study of the krypton bombardment-induced secondary ion emission from some — and lead oxide samples 15
translational energy release
— determination in a short cell in a field-free region of a mass spectrometer 137

uranium hexafluoride
reactions of — with a variety of ions in a flowing afterglow 221
